

Data Flow Diagram

Project: Auto Ticket Classification using Flow Design

Level-1 Data Flow Diagram

Corrected labels from manual review are stored in D1 and used to retrain D2.

Flow Description

- **Ticket Intake:** collects tickets from email, web form and chat into one queue.
- **Preprocessing:** removes noise, lowercases text, removes stop-words and tokenises.
- **Classifier:** predicts category (Billing, Technical, Account, General) and priority (High, Medium, Low).
- **Decision Flow:** if confidence is above the threshold, ticket is auto-routed; otherwise sent to manual review.
- **Storage:** all tickets and final labels are saved for reporting and retraining.
